Abstract:

JP 10312437 A

The system uses a public network (211) through which a customer performs automatic examination (207) of his transaction information and contents of contract with the bank. The customer examines new contract application of personal loan of the bank using the public network. The transfer or rejection of the loan amount to the customer's account is notified to the customer by electronic mail.

ADVANTAGE - Enables automatic examination and authentication of personal loan transaction processing.
